

CANDLE MAKING

1. Melt the wax in a double boiler over low heat. Do not stir. The wax should be completely melted and clear.

2. Add the fragrance oil to the melted wax. Stir gently.

3. Pour the wax into the mold. Tap the mold on the table to remove any air bubbles.

4. Let the candle cool and harden. Do not touch the candle until it is completely solid.

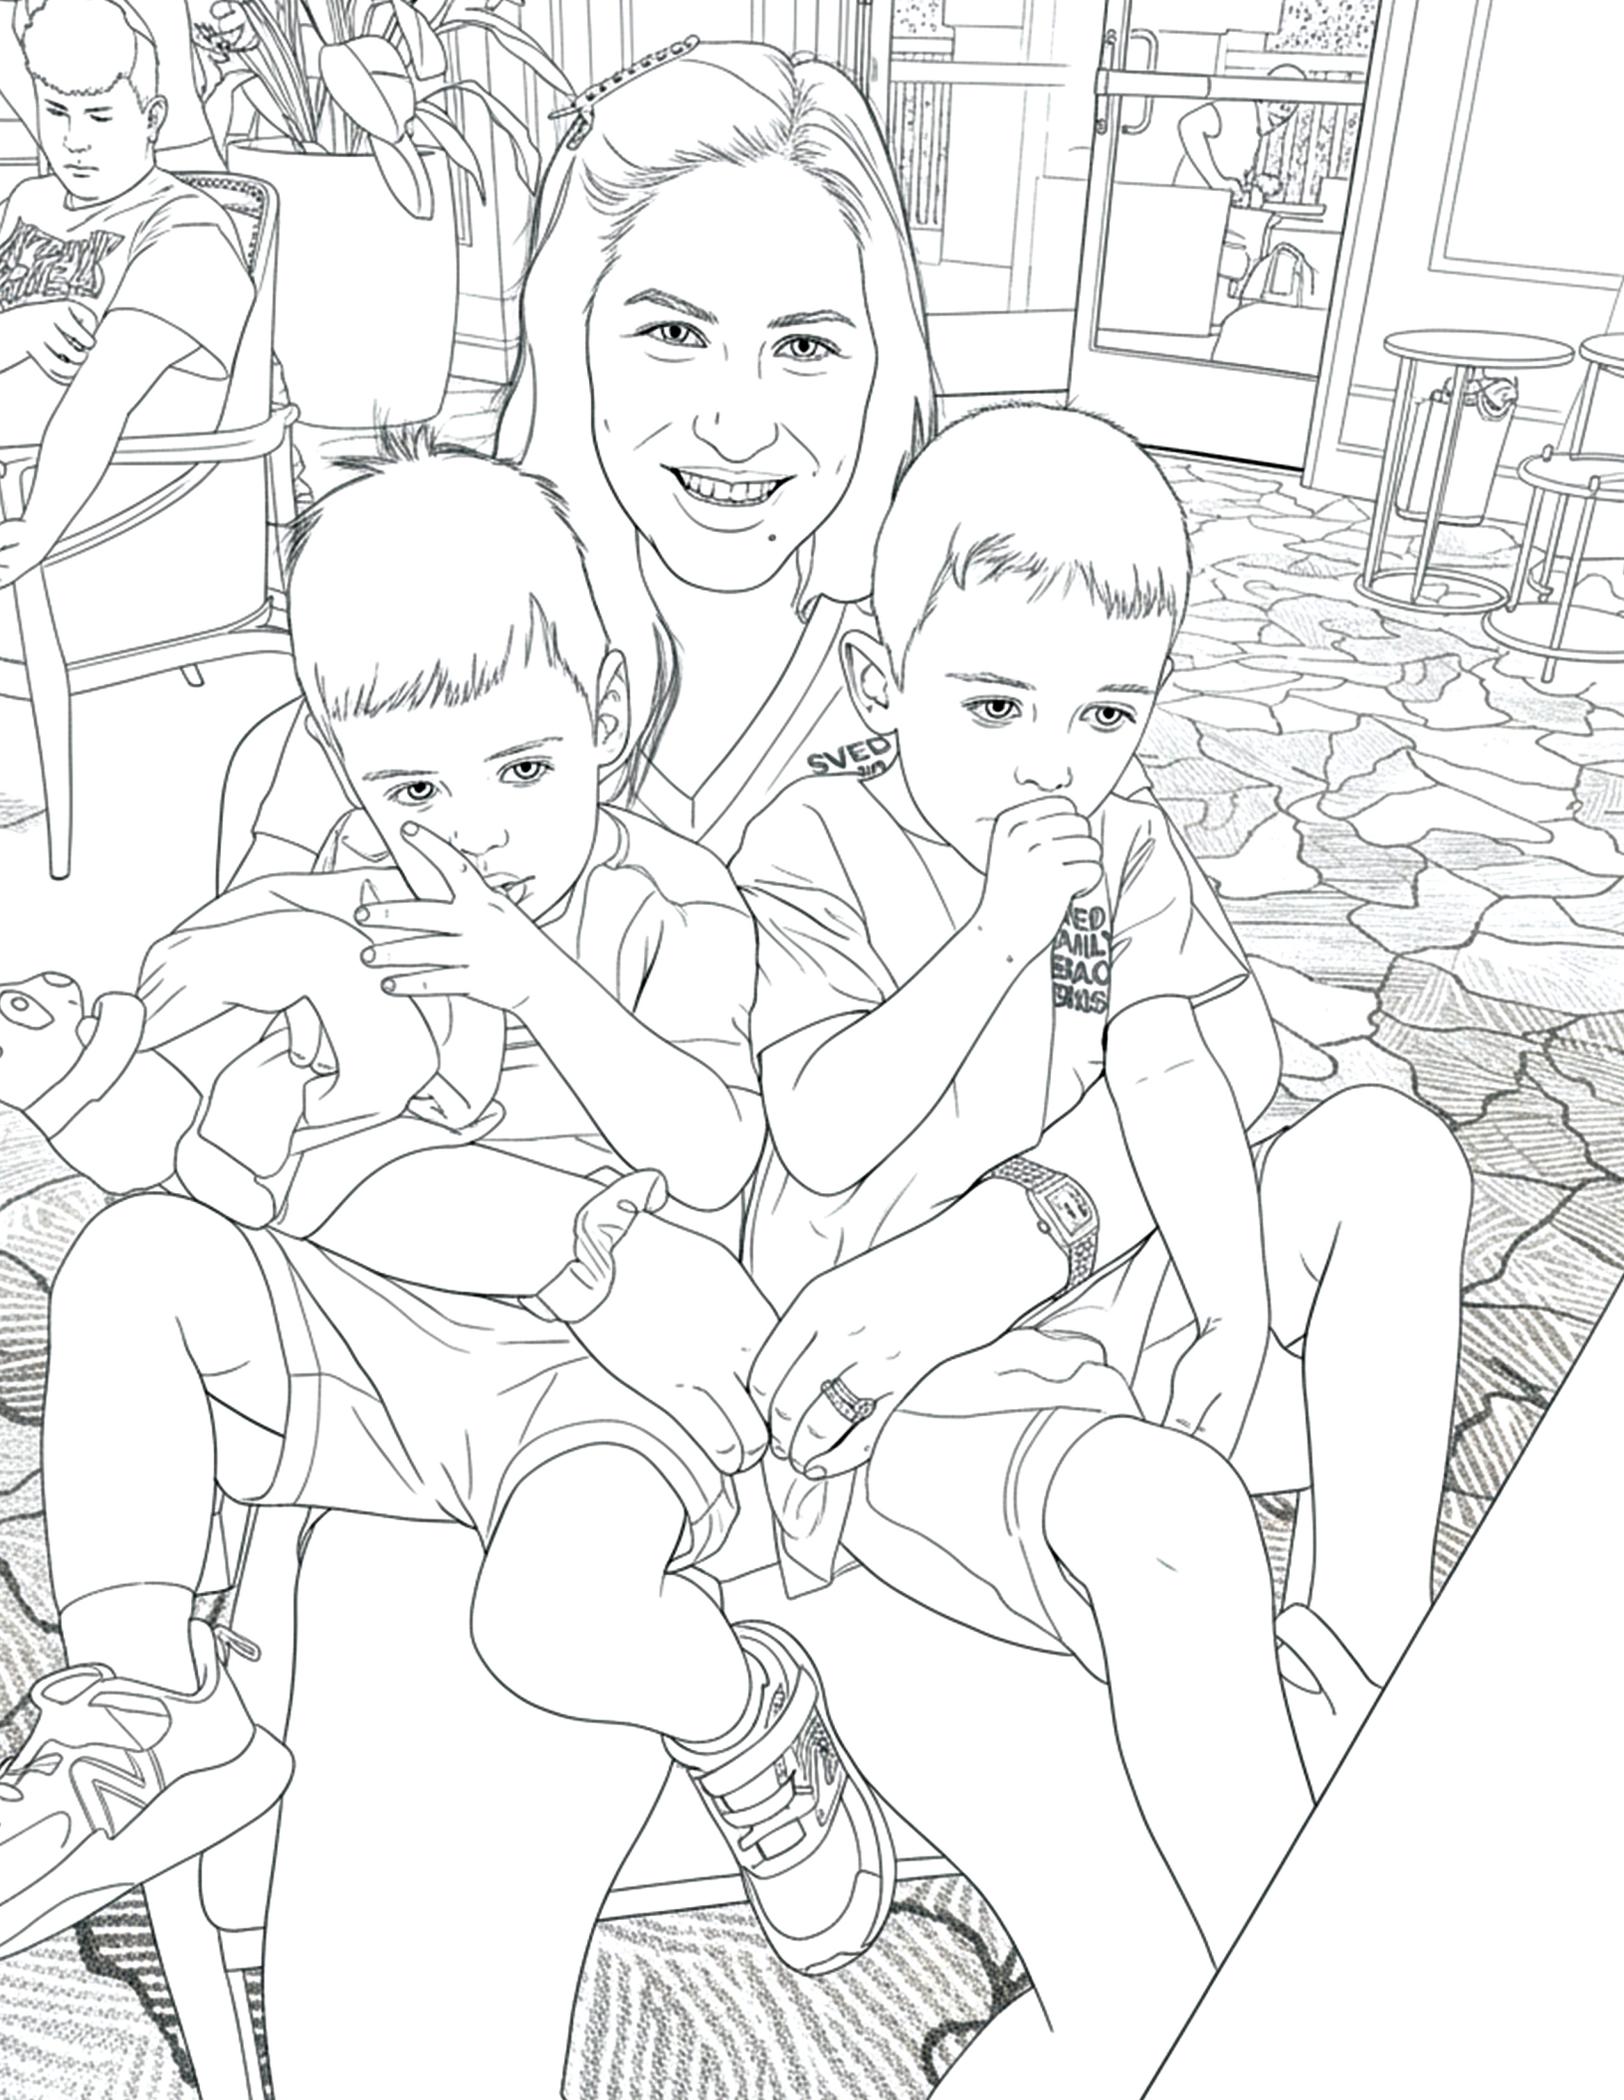

5. Remove the candle from the mold. Trim the wick to 1/4 inch.

6. Enjoy your candle!
